## 194 BASIC ELECRICITY

## Examination Scheme

There will be two papers, both of which will be taken.

194-1 PAPER I: This will consist of two Sections, viz, Section A (Objective) and Section B (essay)

SECTION A: This will comprise of 40 multiple-choice objective questions to be answered in 40 minutes and the paper carries 40 marks.

SECTION B: This will comprise of 7 essay questions our of which the candidates are to answer 5 questions in 2 hours. This paper carries 60 marks.

194-2 PAPER II: PRACTICAL: This will comprise of two practical questions for 3 hours. This paper carries 100 marks.

| S/N | TOPICS/OBJECTIVE | CONTENT | ACTIVITIES/REMARK |
| :---: | :---: | :---: | :---: |
| 1. | Structure of Matter <br> i. Explain the structure of matter and its relevance to electricity/ electronics. <br> ii. Conductors and insulators | 1. The basic concepts of structure of mattermolecule, electron, electric charge, electric current, coulomb and atom. <br> 2. The movement of holes and electrons in a material. <br> - Holes (+ve charge) <br> - Electron (-ve charge) <br> - Like charge repel6 <br> - Unlike charges attract. <br> 3. Elementary concepts of electrons and electron flow. An electric current as flow of electrons. <br> 1. Difference between insulators and conductors. | 1. Chart display to illustrate the structure of matter. <br> 2. Demonstrate the effect of repulsion and attraction by placing two bars of permanent magnets each having North and South poles near each other. <br> 3. Wire a simple circuit to light a bulb to show the flow of electric current. Demonstrate the methods of measuring currents. |
| 1. | Conductors and Insulators | 1. Examples/Types <br> 2. Uses/applications <br> 3. Relationship with semi conductors. | 1. Examine various types of conductors and insulators. |
| 2. | OHM's Law and its Application <br> 1. Define OHM's Law and calculate resistance, voltage and current using OHM's Law <br> 2. Connect resistors, batteries, inductors, capacitors in series and parallel stating the implications of the various connections. <br> 3. Quantitative treatment of Kirchoff's Laws. | 1. Ohms law <br> 2. Relationship between Resistance, Voltage and current using ohm's law e.g. $\mathrm{R}=\underline{\mathrm{V}}_{1}$ <br> 3. Resistors in series, and parallel circuits. <br> 4. Batteries in series, parallel and series parallel connection. <br> 5. Inductors in series and parallel. <br> 6. Capacitors in series, parallel and series-parallel. <br> 7. (a) <br> i. Series connection $\mathrm{R}_{\mathrm{T}}=\mathrm{R}_{1}+\mathrm{R}_{2}+\mathrm{R}_{3} \ldots \ldots \mathrm{R}$ <br> ii. Parallel connection $\frac{1}{\mathrm{R}_{\mathrm{T}}}=\underline{\mathrm{R}_{1}}+\underline{1}+\underline{\mathrm{R}_{2}} \ldots \mathrm{R}_{3} \ldots \mathrm{R}_{\mathrm{n}}$ |  <br> 2. Verify by measurement and calculation. <br> i. Ohms law ii. Kirchoff's law <br> 3. Examine resistors connected in series parallel and series parallel. <br> 4. Examine batteries connected in series, parallel and seriesparallel <br> 5. examine inductors connected in series and parallel. <br> 6. Examine capacitors connected in series, parallel and seriesparallel. |

| S/N | TOPICS/OBJECTIVE | CONTENT | ACTIVITIES/REMARK |
| :---: | :---: | :---: | :---: |
|  |  | iii. Series parallel connection <br> $\mathrm{R}_{\mathrm{T}}$ in series $+\mathrm{R}_{\mathrm{T}}$ in <br> Parallel <br> (b) <br> i. Batteries in series connection $\text { e.m. } \mathrm{f}_{\mathrm{T}}=\mathrm{E}_{1} \quad \mathrm{E}_{2} \quad \mathrm{E}_{3}$ <br> ... $\mathrm{E}_{\mathrm{n}}$ <br> ii. Batteries in parallel connection e.m. $\mathrm{f}_{\mathrm{T}}=$ e.m. f of any <br> cell. <br> iii. Batteries in seriesparallel connection $\mathrm{E}_{\mathrm{T}}=$ number of batteries in series x emf per battery. <br> (c) <br> i. Inductors in series $\mathrm{L}_{\mathrm{T}}=\mathrm{L}_{1}+\mathrm{L}_{2}+$ <br> $L_{3} \ldots L_{n}$ <br> ii. Inductors in parallel <br> .... 1 <br> (d) <br> i. Capacitors in series $\underline{1}=\underline{1}+\underline{1}+\underline{1}$ <br> .... 1 $\begin{array}{llll} \mathrm{C}_{\mathrm{T}} & \mathrm{C}_{1} & \mathrm{C}_{2} & \mathrm{C}_{3} \\ \ldots & \mathrm{C}_{\mathrm{n}} & & \end{array}$ <br> ii. Capacitors in parallel $\mathrm{C}_{\mathrm{T}}=\mathrm{C}_{1}+\mathrm{C}_{2}+$ <br> $\mathrm{C}_{3} \ldots \mathrm{C}_{\mathrm{n}}$ <br> iii. Capacitors in seriesparallel $\mathrm{C}_{\mathrm{T}}$ in series $+\mathrm{C}_{\mathrm{T}}$ in <br> parallel <br> 8. Inductance and capacitance connected in series and parallel. <br> 9. Uses of Kirchoff's Laws | 7. Determine the value of the: <br> a. total resistance of resistors in series parallel and series parallel connection. <br> b. total voltage of batteries in series, parallel and series parallel connection <br> c. total inductance of inductors in series, and parallel and series parallel. <br> d. total capacitance of capacitors in series, parallel and series parallel. <br> 8. Determine the value of inductance and capacitance connected in series and parallel. <br> 9. Determine values of current junction. <br> 10. determine that total Emf and Pds is equal to zero. |

| S/N | TOPICS/OBJECTIVE | CONTENT | ACTIVITIES/REMARK |
| :---: | :---: | :---: | :---: |
|  |  | and its advantages over Ohms Laws. $\begin{aligned} & \mathrm{I}_{\mathrm{T}}=\mathrm{I}_{1}+\mathrm{I}_{2}+\mathrm{I}_{3} \\ & \mathrm{E}_{\mathrm{T}}=\mathrm{E}_{1}+\mathrm{E}_{2}+\mathrm{E}_{3} \end{aligned}$ <br> 10. Use Vector diagram to explain the current law e.g. $\mathrm{I}_{1}+\mathrm{I}_{2}+\mathrm{I}_{3}=\mathrm{I}_{3}+\mathrm{I}_{4}$ |  |
| 4. | Resistors, Capacitors and Inductors Identify and state the function of the various types and sizes of resistors, capacitors and inductors. | 1. Types of resistors, capacitors and inductors. <br> i. composition type resistor <br> ii. wire wound resistor iii. variable and fixed capacitor and inductors. <br> iv. Unit of resistors, capacitors and inductors. <br> 2. Functions of resistors capacitors and inductors. <br> 3. Detail construction of Resistors, capacitors and inductors. <br> 4. Resistor's power rating. <br> 5. Power rating of resistor capacitor and inductor. <br> 6. Application of various types of Resistors. <br> 7. Working voltage of a capacitor. | 1. Examine and identify various sizes of resistors, capacitors and inductors. - state their values. <br> 2. Discuss the functions of resistors capacitors and inductors. <br> 3. Construct a simple Resistor, inductor and capacitor. <br> 4. Examine and state the power rating of some resistors. <br> 5. Examine the power rating of inductors, capacitors and resistors. <br> 6. Mention the application of each component. <br> 7. Verify by measuring the working voltage of a capacitor with voltmeter. |
| 5. | Values and Functions of Resistors Explain the colour coding system of resistors and capacitors and calculate their resistance, capacitance and tolerance from their colour codes. | 1. Colour coding system of resistors and capacitors. <br> 2. Resistors and capacitors and their tolerance through the components colour codes. <br> 3. Tolerance of resistors and capacitors. <br> 4. Value of tolerance of any resistor and Capacitor. | 1. Examine samples of colour coding resistors and capacitors. <br> 2. State their values. <br> 3. Examine the Tolerance of resistors and capacitors. <br> 4. Calculate the tolerance of resistor and Capacitor through their colour codes. |

| S/N | TOPICS/OBJECTIVE | CONTENT | ACTIVITIES/REMARK |
| :---: | :---: | :---: | :---: |
| 6. | Electromotive Force <br> (E.M.F.) <br> 1. Define and distinguish the e.m.f. from potential difference (P.D.) <br> 2. Identify primary and secondary cells and explain the effect of resistance on battery output. | 1. Work, Poser and Energy. <br> 2. e.m.f., P.d.: Difference between e.m.f. and p.d. <br> 3. Types of batteries <br> i. Leclanche <br> ii. Lead-acid <br> iii. Description and characteristics <br> iv. Methods of charging. <br> 4. Cells <br> 5. Series, parallel, seriesparallel cell connection <br> 6. <br> a. Emf total $=\mathrm{E}_{1}+\mathrm{E}_{2}+$ $\mathrm{E}_{3}$ <br> b. $E m f_{T}-E m f$ of any one cell where all cells are of equal voltage. <br> c. $\quad \operatorname{Emf}_{\mathrm{T}}=$ No. of cells in series $x$ e.m.f. per cell <br> 7. Reduction in battery's current output | 1. Discuss power, energy, and work and how they related with each other. <br> 2. Connect battery terminals to external load to give room for p.d. <br> 3. Examine various types of batteries and identify their components. Parts measure their e.m.f. and record them. <br> 4. Test the condition of a cell by measuring its voltage with a voltmeter. Use hydrometer to test the specific gravity of a secondary cell. <br> 5. Carry out the wirings of series, parallel and series - parallel on a wiring board. Measure their e.m.fs. <br> 6. Connect variable resistance to the battery terminals and examine its effect. |
| 7. | AC \& DC <br> a. Distinguish between AC and DC <br> b. Define and explain peak value, mean value, r.m.s. value, frequency of wave. <br> c. Explain and calculate inductive and capacitive reactance. | 1. Difference between AC and DC <br> 2. Characteristics of alternating current <br> i. phase and amplitude <br> ii. addition and subtraction of sine waves <br> iii. wave plotting <br> iv. vector diagrams <br> 3. Peak value, mean value, r.m.s. value, frequency of wave | 1. Display on the cathode ray oscilloscope the signals associated with AC and DC. <br> 2. Plot the sine waves to indicate phase shift and compare results with those observed in the CRO. <br> 3. Identify on a cathode ray oscilloscope peak value, mean value and calculate for r.m.s. |

| S/N | TOPICS/OBJECTIVE | CONTENT | ACTIVITIES/REMARK |
| :---: | :---: | :---: | :---: |
|  |  | 4. Peak value from r.m.s value of current, voltage and vice versa. <br> 5. Simple treatment of R, L, C and AC Circuits <br> 6. Basic concept of resistance in Ac Circuit <br> 7. Inductive and capacitive reactance. <br> i. concept and definition <br> ii. symbols and unit of measurement. <br> iii. Simple problems <br> iv. Simple problems involving complex numbers. <br> 8. Ohm's law in a pure inductive and pure capacitive circuits. | value and frequency of wave. <br> 4. Calculate peak value from r.m.s. value of current, voltage and vice-versa. <br> 5. Display on the C.R.O. input and output signals associated with the following <br> i. RC <br> ii. LC <br> iii. RLC <br> Adjust R and C as appropriate to obtain resonance. <br> 6. Construct a simple experiment involving resistance in AC circuits. <br> 7. Solve simple problems involving inductive and capacitive reactance. <br> 8. Application of Ohm's law, in a pure inductive and capacitive circuits. |
| 8. | Electrical Circuits <br> Analyse, connect and carry out simple calculations on simple electrical circuits. | 1. Difference between series and parallel circuits <br> 2. Total Resistance in series DC circuit. <br> 3. Voltage drop across series connected resistor. <br> 4. Total resistance in parallel circuit. <br> 5. Effect of resistors in series and parallel circuits. <br> 6. Current in each arm of a parallel circuit. <br> 7. Total voltage and current in a series and parallel connected cells. <br> 8. Voltage and current in a series-parallel circuit. | 1. Explain the difference between series and parallel circuits. <br> 2. Calculation of total Resistance in series DC circuit. <br> 3. Calculate the voltage drop across series connected resistor. <br> 4. Calculate the Total resistance in parallel circuit. <br> 5. Perform experiments by wiring circuits of series and parallel connections to show their effects. |

| S/N | TOPICS/OBJECTIVE | CONTENT | ACTIVITIES/REMARK |
| :---: | :---: | :---: | :---: |
|  |  | 9. Effect of capacitor in an electric circuit. <br> 10. Current and voltage relationship in: <br> i. an inductive circuit $\mathrm{I}_{1}$ $\operatorname{lag} \mathrm{E}_{2}$ <br> ii. capacitive circuit Ec lags Ic <br> iii. the combination of capacitor and inductor: a.in series b.in parallel <br> 11. Impedance <br> 12. Impedance in an AC circuit <br> 13. Resonance in: <br> i. Series <br> ii. Parallel circuits. <br> 14. Circuit symbols used in schematic diagram <br> 15. Q-factor and Band-width. <br> 16. Resonance frequency. | 6. Calculate Current in each arm of a parallel circuit. <br> 7. Calculate Total voltage and current in series and parallel circuit. <br> 8. Calculate the voltage and current in a seriesparallel circuit. <br> 9. Wire a simple circuit to show the effect of capacitor in an electric circuit. <br> 10. Draw a phase diagram to show how $\mathrm{I}_{1} \operatorname{lag} \mathrm{E}_{2}$ by 90 and Ec lags Ic by 90 . <br> Draw a phase diagram to show the resultant effect of capacitors and inductors connected in a series. <br> 11. Define impedance. <br> 12. Solve simple problems involving impedance showing its relationship with voltage and current in an AC circuit i.e $I=\frac{V}{Z}, Z=\frac{V}{I}$ <br> 13. Solve simple problems involving resonance. <br> 14. Chart display of different types of symbols used in schematic diagrams. <br> 15. Solve simple problems on resonance frequency. |
| 9. | Indicating <br> Instruments and <br> Measuring <br> Instruments | ```1. Functional part of multi- meter: \\ i. Ammeter \\ ii. Voltmeter``` | 1. Discuss the functional parts of a multimeter. <br> 2. Connect: <br> i. Ammeter in series |

| S/N | TOPICS/OBJECTIVE | CONTENT | ACTIVITIES/REMARK |
| :---: | :---: | :---: | :---: |
|  | Explain the operation, uses and limitations of indicating and measuring instruments and operate them. | iii. Ohmeter <br> 2. Measurement of current, voltage and resistance in AC and DC circuits. <br> 3. Ohmeter for testing semiconductors devices. <br> 4. Faulty meters. | to measure the current flowing in AC and DC circuits. <br> ii. Voltmeter in parallel to measure the voltage flowing in AC and DC circuit. <br> 3. Use ohmmeter to measure resistance in AC and Dc circuit. <br> 4. Compare the readings of two three or more meters together and identify the faulty one. |
| 10. | Magnetism, induction and Transformers <br> 1. Explain the concept of magnetism and understand the principles of a transformer, its construction and operation. <br> 2. Explain the concept of electromagnetic induction. <br> 3. Identify the various types of transformers, calculate transformer efficiency and construct a simple single-phase double wound transformer. | 1. Basic concepts of magnetism. <br> 2. Basic concepts of electromagnetic <br> i. Magnetomotive force <br> ii. Magnetic field strength <br> iii. Magnetic flux <br> iv. Magnetic Flux density. Effect of field as applied to electromagnetism. <br> 3. Relation of field in an ideal transformer. <br> 4. Principle of induction. i. self induction ii. mutual induction Difference between self induction and mutual induction <br> 5. Colour codes used for winding of transformers. <br> 6. Basic principles of a single phase, doubt wound transformer. <br> i. mutual inductance <br> ii. conservation of energy <br> iii. operation of | 2. Solve simple problems involving magnetic circuits. <br> 3. Demonstrate the effect of an induced e.m.f by means of a galvanometer pointer. Discuss the relation of field in an ideal transformer. <br> 4. Plot magnetic field due to current in: <br> i. a long straight conductor <br> ii. a long solenoid iii. two parallel conductors. <br> 5. Examine and discuss the single phase double wound transformer as approximate constant voltage device. <br> 6. Examine the different colour codes used for the winding of transformers. |

| S/N | TOPICS/OBJECTIVE | CONTENT | ACTIVITIES/REMARK |
| :---: | :---: | :---: | :---: |
|  |  | transformers magnetic circuit (core) <br> iv. primary windings Turns ratio-cooling <br> 7. Core lamination of a transformer. <br> - Reasons <br> 8. Types of losses in transformers. <br> i. copper losses ii. core losses (Eddy current and hysteresis losses) <br> 9. Transformer Efficiency <br> 10. Detailed construction of a simple single phase double wound transformer. <br> 11. Types of transformers i. single phase <br> ii. three phase (star \& delta connections) <br> iii. auto-transformer <br> iv. E-type transformer <br> v. C-Core transformer <br> vi. Toroidal Transformer <br> vii. Rop/lot transformer <br> viii. Output transformer <br> ix. 3-phase transformer <br> x. Current transformer | 7. Examine and discuss the single-phase double wound transformer as approximate constant voltage device. <br> 8. Examine the laminating of the core of a transformer. <br> 9. discuss transformer Losses. <br> 10. Calculation of transformer efficiency. <br> 11. Construct a simple single phase double wound transformer. <br> 12. Visit an electrical workshop and identify various types of transformers. |
| 11. | Fluxes, Solders and Soldering Explain principles of soldering and solder various electric and electronic connections. | 1. Basic concepts of soldering <br> 2. Types of irons <br> i. Soldering <br> ii. Electric <br> iii. Ordinary <br> 3. Types of fluxes <br> i. Composition <br> ii. application <br> 4. Sources of heat <br> i. electric <br> ii. battery <br> 5. Cleaning of wire surfaces. | 1. Introduction to different types of soldering. <br> 2. Examine different types of iron <br> 3. Examine different types of fluxes <br> 4. demonstrate the use of electric or battery for soldering <br> 5. Demonstrate cleaning of wire surfaces <br> 6. Demonstrate soldering of wires with the use |

| S/N | TOPICS/OBJECTIVE | CONTENT | ACTIVITIES/REMARK |
| :---: | :---: | :---: | :---: |
|  |  | 6. Soldering of wires <br> 7. Cold solder joint and dry joint <br> 8. Scrapping of wires <br> 9. Methods of termination <br> i. twisted loop termination <br> ii. claw type termination <br> iii. solder lugs <br> iv. shade and termination <br> v. crimped end termination <br> 10. Cable jointing. | of: <br> i. electric soldering iron <br> ii. blow lamp iii. plot and ladle <br> 7. Discuss cold solder joint and dry joint. <br> 8. Demonstrate how wires are scrapped for soldering. <br> 9. Demonstrate different methods of wire termination. <br> 10. Demonstrate how cables are joined together. |
| 12. | Electronic Signs and Symbols <br> Draw and interpret basic electronic/electrical signs and symbols. | 1. Abbreviation in electrical/electronics circuits <br> 2. Graphical symbols used in electrical/electronics systems. <br> i. transistors <br> ii. amplifier <br> iii. switch <br> iv. socket outlet | 1. Explain the meaning of abbreviation used in electrical circuits. <br> 2. Display a chart showing Graphical symbols used in electrical/electronics systems |
| 13. | Wiring and Connection of Electrical/Electronic Component Wire different types of plugs and assemble components on a chassis | 1. Types of plugs <br> i. Mains <br> ii.Coaxial <br> iii.Phone <br> iv. Jack plugs <br> 2. Soldering and wiring of components to: <br> i. tag boards <br> ii. strips <br> iii. printed board iv. vero-board. <br> 3. Assembling of components on a chassis | 1. Examine different types of plugs. <br> 2. Demonstrate how soldering and wiring of components are being carried out. <br> 3. Demonstrate how components are being assembled on chassis. |
